Desk Setup Requirements (Online Students)

Handwriting is an important academic skill. The quality of handwriting is affected by multiple factors including posture and body control.

It is important for children to be positioned properly in order to support handwriting skills. Chairs, tables and desks should properly fit each child. The child will form poor posture habits and spend many hours in discomfort if correct positioning is not accommodated.

Appropriate Chair Size

- Each child should have a chair that allows the feet to be placed flat on the floor (a footstool may serve this purpose). This provides a stable base from which to work. It also assists with weight shifting and postural adjustments during writing.
- Hips, knees and ankles should all be bent at a 90-degree angle.
- The seat should provide support in the back high enough to reach slightly below the student's shoulder blades.
- The seat depth should be such that the child can sit all the way back in the seat and still have room to comfortably bend the knees. The chair should not be angled, thus tilting the student back.

Appropriate Desk Size

- The desk or table top should be 2 inches above the student's bent elbow when seated. (Desks with adjustable legs are a good option.)
- The desk should be wide enough to allow for 24" between the side of the student and the webcam. As an alternative, the student may have a small table or stand to hold the webcam.
- Students will need drawers or a shelf to hold their books.

Lap desks do not support good posture and are not recommended.
